

Artificial Intelligence Test Document

Artificial Intelligence (AI) is a field of computer science focused on building systems that can perform tasks requiring human intelligence, such as reasoning, learning, problem solving, and understanding language.

Machine Learning

Machine Learning is a subset of AI. Instead of explicitly programming every rule, algorithms learn patterns from data. Common types include supervised learning, unsupervised learning, and reinforcement learning.

Applications

AI is used in healthcare for disease prediction, finance for fraud detection, education for personalized learning, cybersecurity for threat detection, and chatbots powered by Large Language Models (LLMs).

Conclusion

This document is intended for testing a Retrieval-Augmented Generation (RAG) chatbot. The chatbot should be able to answer questions such as: 'What is AI?', 'What is Machine Learning?', 'List three applications of AI.', and 'What are LLMs?'.
