Hypertension (High Blood Pressure)

Hypertension is a chronic condition where blood pressure stays consistently high. Risk factors include obesity, smoking, excess salt intake, stress, family history, and physical inactivity.

Symptoms

Many people have no symptoms. Others may experience headaches, dizziness, blurred vision, chest pain, or shortness of breath.

Diagnosis

Doctors diagnose hypertension using repeated blood pressure measurements. Additional tests can include blood tests, ECG, and kidney function tests.

Treatment

Treatment includes lifestyle changes such as exercise, weight management, reduced salt intake, quitting smoking, and medications prescribed by a healthcare professional.
